FOR IMMEDIATE RELEASE

**Eye Marker Systems, Inc. and West Virginia High Technology Consortium
Foundation enter into Memorandum of Understanding**

Morgantown, W. Va., November 29, 2006 – Eye Marker Systems, Inc. has entered into a partnership with The Office of Law Enforcement Technology Commercialization (OLETC). The goal of the collaboration is to coordinate strengths to further their research and development and ultimately provide an affordable, non-invasive product to detect human health conditions in extreme environments.

Eye Marker Systems, Inc. has been committed to the research, discovery and commercialization of an innovative ocular screening technology since its founding in 2001. They developed the Eye Marker Platform and specialize in the development of image analysis software for the Ocular Scanning Instrument (OSI). The OSI is a unique, noninvasive device designed to examine and measure specific physical anomalies (biomarkers) in the eye and extrapolate these findings to evaluate the potential health impact to the entire body. The instrument also assists in giving the medical community the ability to recognize diabetes, hypertension and other systemic diseases through the human eye.

OLETC assists technologists and entrepreneurs in commercializing advanced technology for use by law enforcement, corrections and first responder professionals. Their mission is to combine research and private industry to make affordable, market-driven technologies available to Public Safety and Homeland Security communities. OLETC has commercialized a total of 27 technologies over the past five years and are currently assisting more than 100 technologists and entrepreneurs.

The joint collaboration may include prototype design and functionality requirement recommendations, beta test site coordination, operational assessment/performance projects and report generation. The alignment of the two companies will produce mutual opportunities to participate in the developmental guidance and feedback on the

operational suitability and competency of prototypes and/or products as they relate to various Law Enforcement and Corrections agencies as well as other emergency response disciplines.

For further information on Eye Marker System, Inc., contact Chief Executive Officer, Wes McGee by phone at 304-598-1101 or by email at wesmcgee@eyemarkersystems.com
